BYK Additives
The coolest thing about hot engines

A look under the hood causes the hearts of many automobile lovers to beat faster. Those who look closely will increasingly discover engine and cable covers made from materials such as polyamide or polypropylene. This is because, thanks to BYK additives, these materials can withstand high temperatures and contribute towards weight savings on the vehicles. BYK is a driving force in the development of this type of additive preparations for thermoplastic synthetics, and is therefore always a hot favorite for the production of vehicles. No wonder the automobile industry finds our additive solutions extremely cool.
