Whether it’s a seat, central console, gearshift sleeve, instrument panel, side panel or sun visor – where the haptic and optical properties of plastics deployed in the automotive sector are concerned, BYK additives enable manufacturers to shift into a higher gear. High-quality rheology, wetting and dispersing additives, air release agents or defoamers, wax and modified silicone additives facilitate a top performance in wear resistance, haptics, durability, and uniform color strength.

Move into the fast lane – with BYK additives.
