Manual
Read the operation manual carefully before operating this device.

Please keep it for further reference.
Operation Manual

byko-spectra pro

- Read the operation manual carefully before operating this device
- Please keep it for further reference
Please note where this Attention Symbol appears on the equipment and in this manual. This symbol alerts you to potentially HAZARDOUS SITUATIONS that require your immediate attention.

Security Information

Please read and follow this instruction before assembling, installing and operating the device. If the equipment is used in manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

NOTE:

1. USE A PROPER POWER SOURCE
   Consult the label attached to the back of luminaire for the proper power source. Operation with an incorrect power source that is not specified on the label may generate inaccurate lighting conditions, damage to the device, and cause personal injury.

2. RUNNING THE DEVICE IN A PROPER ENVIRONMENT
   Ensure the color of surrounding environment of byko-spectra pro is of a neutral color (recommended: N5 or N7). Prevent any chromatic reflections from the surrounding environment. Warm up the light source (about 15 mins) before using it to ensure the light source is stable. Do not block the vents. Make sure to leave at least 300 mm free space around the equipment when installing the luminaire, to insure proper ventilation.

3. KEEP AWAY FROM WATER AND MOISTURE
   Do not place the equipment under a sprinkler head or any environment that may cause hazards from spilled water. Make sure there will be no liquids or uncontrolled moisture leaks to the device which will result in electric shock.

Recommendation area for observation

(DIMENSIONS ARE IN INCHES.)
Please note where this Attention Symbol 🚨 appears on the equipment and in this manual. This symbol alerts you to potentially HAZARDOUS SITUATIONS that require your immediate attention.

Maintenance and Cleaning

**Clean properly:** Wipe the device with a clean, white lint-free cloth. Do not use any liquid cleaners or agents containing wax, which will change color, reflectance and gloss properties of the device. Clean outer surfaces with a damp cloth containing a mild soap. Do not spray or drop water into the equipment.

**Carefully handle the lamp and daylight filter:** Wait for the lamps or daylight filter to cool down before handling them. Use lens paper or similar products to handle the lamps since fingerprints and oils will affect the performance of the lamp.

**Caution:** Please note where these Attention Symbols appear on the equipment and in this manual. These symbols alert you to potentially HAZARDOUS SITUATIONS that require your immediate attention.

⚠️ **CAUTION!** When using the UV light avoid looking directly at the light or exposing skin to rays of the light.

🔥 **HOT!** Diffusion glass, vents, filters and lamps will be very hot during operation. Keep your hands away from the device until it has cooled down.

⚡ **Electric Shock!** Do not attempt to open any parts of the device. Consult with a trained BYK-Gardner technician.

**Warranty information**

The warranty period for the instrument is 12 months (from the day when you have the invoice). If any fault occurs during this period, as the result of normal use, the repair will be free-of-charge.

The above warranty statement above does not apply when damage was caused by the following operations:

a) The operating instructions of this manual were not followed.

b) Using accessories and spare parts, which were not provided by BYK-Gardner.

c) The device was serviced or repaired by someone other than a BYK-Gardner factory trained technician.

About Us
Introduction and Assembly

Introduction

byko-spectra pro is a new innovative light booth with high quality light sources conforming to international CIE standards. It can be used in the field of color quality management in industries like coatings, inks, textiles, printing and dyeing, pigments, photography, ceramics, packaging, cosmetics, auto and many more. byko-spectra pro can be used to accurately describe the color of goods, match color, identify color and fluorescent substances. It can be used for in-process analysis for sampling, production, quality control, inspection to ensure color quality is met according to customer specifications. Thereby, this product can help to improve product quality and enhance market competitiveness.

Functions and Characteristics

- **Eight light sources:**
  - DL (Daylight)
    - a) D65: Real-time Color Temperature, MlVIS<0.25 (A-Class), CRI(Ra)>98
    - b) D75: Real-time Color Temperature, MlVIS<0.25 (A-Class), CRI(Ra)>98
  - HZ (Horizon) Real-time Color Temperature
  - A (Incandescent) Real-time Color Temperature
  - CWF Adjustable light levels with auto lux/voltage control
  - TL84 Adjustable light levels with auto lux/voltage control
  - U30 Adjustable light levels with auto lux/voltage control
  - UV Calibrated and adjustable UV level

- **Intelligent Switching Power Control**
  It employs intelligent voltage control to insure constant power supply to all light sources. Especially it assures the sustainability and consistency of daylight source, A light source and horizon light source.

- **Intellectual Monitoring System**
  The built-in sensor is capable of monitoring the changes of color temperature and light intensity of all light sources and the lighting energy of the ultra-violet light simultaneously. It allows users to comprehend working conditions of various light sources visually.

- **Real-time clock**
  Operator can use the real-time clock to set date and time, which will appear on the report.

- **Large Color Display**
  The 4-inch color LCD display shows real-time data of multiple functions and guarantees ease-of-use.

- **Intelligent Fluorescent Source Control**
  It has normalized control on fast automatic switch of groups of fluorescent source. It monitors illuminance value of light source at real time shown on HMI displaying the stability of light
Introduction
byko-spectra pro is a new innovative light booth with high quality light sources conforming to international CIE standards. It can be used in the field of color quality management in industries like coatings, inks, textiles, printing and dyeing, pigments, photography, ceramics, packaging, cosmetics, auto and many more.

byko-spectra pro can be used to accurately describe the color of goods, match color, identify color and fluorescent substances. It can be used for in-process analysis for sampling, production, quality control, inspection to ensure color quality is met according to customer specifications. Thereby, this product can help to improve product quality and enhance market competitiveness.

Functions and Characteristics
- **Eight light sources:**
  - DL (Daylight) a) D65: Real-time Color Temperature, MI VIS<0.25 (A-Class), CRI(Ra)>98
  - D75: Real-time Color Temperature, MI VIS<0.25 (A-Class), CRI(Ra)>98
  - HZ (Horizon) Real-time Color Temperature
  - A (Incandescent) Real-time Color Temperature
  - CWF Adjustable light levels with auto lux/voltage control
  - TL84 Adjustable light levels with auto lux/voltage control
  - U30 Adjustable light levels with auto lux/voltage control
  - UV Calibrated and adjustable UV level

- **Intelligent Switching Power Control**
  It employs intelligent voltage control to insure constant power supply to all light sources. Especially it assures the sustainability and consistency of daylight source, A light source and horizon light source.

- **Intellectual Monitoring System**
  The built-in sensor is capable of monitoring the changes of color temperature and light intensity of all light sources and the lighting energy of the ultra-violet light simultaneously. It allows users to comprehend working conditions of various light sources visually.

- **Real-time clock**
  Operator can use the real-time clock to set date and time, which will appear on the report.

- **Large Color Display**
  The 4-inch color LCD display shows real-time data of multiple functions and guarantees ease-of-use.

- **Intelligent Fluorescent Source Control**
  It has normalized control on fast automatic switch of groups of fluorescent source. It monitors illuminance value of light source at real time shown on HMI displaying the stability of light source. Moreover, users can adjust illuminance value of fluorescent sources manually in order to meet their different requirements.

- **Wired Cascade and Remote Control**
  Devices can be wired together to reduce repetitive actions when several devices are working together. Remote control can be used to control light sources from a distance of 10 (max) meters in open spaces (without any wall or obstacle).

- **High-Class Stabilized Daylight Source**
  To simulate CIE standard illuminants D65 and D75, byko-spectra pro employs innovative technology of new halogen lamps, combined with special filter and LED optical compensation. Thus, two high quality daylight sources are guaranteed corresponding to two CIE standard illuminants.

  The Metameric Index (MI) of spectral power distribution is able to stabilize in MI VIS class A according CIE Publication 51.2.

- **Uniform Lighting Extent on Color Observation**
  It refers to the central specified area (420mm×300mm) on the floor of viewing booth. For daylight, Incandescent A, Horizon light source, the degree of illumination uniformity exceeds 95%. Thus, it meets the requirements of ISO 105A II (Light source technological standard of color assessment cabinet for the use of color image analysis).

- **Color Quality of Cabinet Surfaces**
  The color quality of the cabinet surfaces conforms to Munsell N5 and N7.
**Components**

**Luminaire**

**USB cable**
Connect light booth to PC, to update software or get report data.

**Cascade cable**
For cascading light booths to control their performance.

**Remote controller**
Control light booths remotely.

**Power Cord**
(one of three)
1. CHINA Power Cord
2. Europe Power Cord
3. US Power Cord

**Backup fuse**

**Luminaire**

**Power Switch**

**USB port**

**Cascade port**

**Snap Hook**

Light Booth Assembly

Choose a smooth surface for installation with sufficient space. Be careful not to scratch the surface of the light booth during installation.

1. Place the floor/base plate in the middle of the table.
2. Place the backboard behind the floor/base plate, and use two mounting screws to tighten it.
3. Place the left side panel along the guide chute sliding to the bottom as shown in figures 3, 4.
4. Fasten the back side screws.
**Light Booth Assembly**

Choose a smooth surface for installation with sufficient space. Be careful not to scratch the surface of the light booth during installation.

1. Place the floor/base plate in the middle of the table
2. Place the backboard behind the floor/base plate, and use two mounting screws to tighten it.

3. Place the left side panel along the guide chute sliding to the bottom as shown in figures 3,4.
4. Fasten the back side screws.
5. Fasten the side screw.
6. Slide the right side panel to the bottom in the same way.

7. Fasten the backside screws on the right side panel.
8. Fasten the side screw inside the right side panel.

9. Slide the front diaphragm into buckle as shown in the graphic.
10. Push up firmly to the side panel, and fasten the screws on both sides.
11. Use the left and right handles on the top of luminaire, position the luminaire into the locating pin as shown below. Then tighten the back, left and right side mounting screws.

12. Diffuser (Diffuse glass) installation. Refer to the steps 3 through 6 of ‘Luminaire Installation’.

If you need to assemble attenuator, please follow figure 11.
Luminaire Installation

If you need to install a single or multiple overhead luminaires, please follow these steps.

NOTE:
- Do not install overhead luminaire under any fire sprinkler head. Heat generated by the luminaire may activate the sprinkler system.
- Install according to local electrical regulations. A dedicated branch circuit is recommended for each luminaire.
- Make sure there is adequate support for each luminaire. Each luminaire weighs 49 kg (108.1lbs).
- Carefully assemble the diffuser to avoid breaking any of the lamps.

1. Unpack and remove the overhead luminaire and its diffuser from the carton and set aside.

2. Attach supplied snap hooks and chains (not supplied) to each of the brackets and suspend a single or multiple luminaires at the appropriate height and angle over the work area. The device(s) should be installed so that a minimum of 300 mm (11.9 inch) from each other or the wall surface exists.

3. Hold the diffuser and ensure its smooth side is facing away from the luminaire.

4. Place the right hinge pin of the diffuser between micro-switch and the diffuser bracket. Then, place the left hinge pin of the diffuser into the diffuser bracket. Refer to figure 12.
5. Smoothly push the diffuser until it's locked in the slot of the bracket.

6. Rotate the front of the diffuser up until it's locked with the latch.

7. For a single luminaire installation, please go to step 10. For multiple luminaire installations, repeat steps 2 through 7 and then go to step 8.

8. Connect each device with Cascade cables.

9. Only after the installation of overhead luminaire(s) is completed, the device(s) can be plugged into an AC wall outlet.

10. Refer to 'System Setup' for information on powering up, usage, and daisy chain configuration.
**Power On**

Toggle the power switch (ON/OFF) under the front edge of the panel on the left side.

Immediately after the power is ON, the device will go through a brief system self-test. The main menu will then appear on the screen with the testing report. Press ENTER to close the report window, or wait for 5 seconds until the window closes automatically.

**NOTE:** When the power is turned OFF, please wait at least 5 seconds before you turn power ON again. This operation enables the firmware and hardware to properly shut off. If you attempt to turn on the power within less than 5 seconds after the power was turned off, the device may not switch on. If this occurs, please turn OFF the power again, wait at least 5 seconds, and then turn it on using the power switch.
Main Menu

Use the left (◀), right (▶), up (▲), and down (▼) arrow button on the right of the panel to go through functions and options or adjust values. Items will be highlighted when selected. Use ENTER to confirm and save changes.
For example, use up (▲) and down (▼) arrow button to select ‘DL’, and press ENTER, the white point will turn red while the daylight simulator turns on. If you want to turn it off, press ENTER again.

NOTE: After the lamp is switched on, please allow time to system to retest the value of $T_{cp}$ and Ev.
System Setup

Setup mode is used to adjust and scan the device settings. For first-time usage, you should set and scan the settings. You can go back and modify these settings anytime. Each setting is explained on the following pages.

**Administration (ADMIN)**

The ADMIN menu is used to configure owner, system, profile, operator and time settings, to replace lamps and do a factory reset.

1. Use up(▲) and down(▼) arrow button to highlight ‘SETUP’ option, press ENTER button to access the system setup.

2. Highlight the ‘ADMIN’ option, press ENTER button to access the administration screen.

**ADMIN_OWNER**

1. Highlight ‘OWNER’ option and press ‘ENTER’ button to access the owner screen.
The following are descriptions of the owner options

<table>
<thead>
<tr>
<th>Owner Options</th>
<th>Text Entry</th>
<th>Factory Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Company</td>
<td>Text</td>
<td></td>
<td>Enter company name with a maximum of 15 characters. The name appears on the reports.</td>
</tr>

</tr>
<tr>
<td>Admin Password</td>
<td>Text</td>
<td></td>
<td>Enter a new password with a maximum of 15 characters. Password protection can be activated or deactivated in the systems settings.</td>
</tr>
</tbody>
</table>

2. Use the up(▲) and down(▼) arrow button to highlight the desired option.
3. After the option is highlighted, press the ENTER button to access the editing screen.
4. Enter required text or select desired option. Refer below for additional information about text editing.

- Use the left(◄), right(►), up(▲) and down(▼) arrow button to highlight the letter/number in the soft keyboard.
- Press ENTER to add the character to the editing field.
- Press EXIT to delete one character at one time.
- Continue with additional letter/number until the editing field is complete.
- Press SAVE to save the editing field when finished.

5. When finished with owner options, press the EXIT to exit the owner screen.
**ADMIN_SYS**

1. Use the up(▲) and down(▼) arrow button to highlight ‘SYS’ option. Then press ENTER to access the system screen.

The following are descriptions of the system settings.

<table>
<thead>
<tr>
<th>System Settings</th>
<th>Value or Option Selection</th>
<th>Factory Default</th>

</tbody>
</table>

2. After the option is highlighted, press the ENTER button to access the editing screen.
3. Enter required text or select desired option or value for system settings. Refer below for additional information about editing the system settings.
To select option:

- Use the up(▲) and down(▼) arrow button to highlight the desired option.
- Press ENTER to save the selected option/value.

To enter text/value:

- Use the left(◄), right(►), up(▲), and down(▼) arrow button to highlight the letter/number in the soft keyboard.
- Press ENTER to add the character to the editing field.
- Press EXIT to delete one character at one time.
- Continue with additional letter/number until the editing field is complete.
- Press SAVE to save the editing field when finished.

When finished with editing field options, press ‘EXIT’ to exit the system screen.

**ADMIN_RLAMP**

The RLAMP screen displays the hours and cycles remaining for each lamp in the system. From this screen, the user can reset hours/cycles, select type of lamp, change EOL parameters and add lamp serial numbers.

1. Use the up(▲) and down(▼) arrow button to highlight the ‘RLAMP’ option. Then press ENTER to access the lamp replacement screen.
2. Using the up(▲) and down(▼) arrow button to highlight each lamp to view the detail of them, such as the type of lamp, the hours/cycles remaining and the lamp serial number.
Selecting Type of Lamp
Select the lamp type installed from the list. If the lamp type is not in the list, please consult our technical support.

NOTE: If D75 illuminant is used, the attenuator must be installed and the option of user setting should be modified. Refer user settings in ‘System Setup’.

1. Using the up(▲) and down(▼) arrow button to highlight desired lamp.
2. Use ENTER to confirm the lamp, then highlight the type of lamp by pressing the up(▲) and down(▼) arrow button.
3. Press ENTER to access ‘Type of Lamp’ screen.
4. Use the up(▲) and down(▼) arrow button to choose the desired type DL6500K or DL7500K.
5. Press ENTER to save.

Resetting Hours/Cycles
This option is used to reset the lamp hours and cycles after a new lamps are installed.
1. Use the up(▲) and down(▼) arrow button to highlight desired light source.
2. Use ENTER to confirm, then highlight the lamp hours and cycles by pressing the up(▲) and down(▼) arrow button.
3. Press ENTER to access the ‘Remaining Hours’ or ‘Remaining Cycles’ screen.
4. Reset lamp settings.
Selecting Type of Lamp

Select the lamp type installed from the list. If the lamp type is not in the list, please consult our technical support.

NOTE: If D75 illuminant is used, the attenuator must be installed and the option of user setting should be modified. Refer user settings in 'System Setup'.

1. Using the up(▲) and down(▼) arrow button to highlight desired lamp.
2. Use ENTER to confirm the lamp, then highlight the type of lamp by pressing the up(▲) and down(▼) arrow button.
3. Press ENTER to access ‘Type of Lamp’ screen.
4. Use the up(▲) and down(▼) arrow button to choose the desired type DL6500K or DL7500K.
5. Press ENTER to save.

Resetting Hours/Cycles

This option is used to reset the lamp hours and cycles after a new lamps are installed.

1. Use the up(▲) and down(▼) arrow button to highlight desired light source.
2. Use ENTER to confirm, then highlight the lamp hours and cycles by pressing the up(▲) and down(▼) arrow button.
3. Press ENTER to access the ‘Remaining Hours’ or ‘Remaining Cycles’ screen.
4. Reset lamp settings.

Refer below for additional information about editing of the reset.

Enter a lamp serial number

A lamp serial number can be a maximum of 15 characters. The number to enter is printed on the lamp or the lamp packaging.

1. Using the up(▲) and down(▼) arrow button to highlight desired lamp.
2. Use ENTER to confirm the lamp, then highlight the lamp Left/Right serial number by pressing the up(▲) and down(▼) arrow button.
3. Press ENTER to access ‘Left/Right serial number’ screen.
4. Enter the lamp serial number.

Entering a lamp serial number

A lamp serial number can be a maximum of 15 characters. The number to enter is printed on the lamp or the lamp packaging.

1. Using the up(▲) and down(▼) arrow button to highlight desired lamp.
2. Use ENTER to confirm the lamp, then highlight the lamp Left/Right serial number by pressing the up(▲) and down(▼) arrow button.
3. Press ENTER to access ‘Left/Right serial number’ screen.
4. Enter the lamp serial number.

- Use the left(◄), right(►), up(▲), and down(▼) arrow button to highlight the number in the soft keyboard.
- Press ENTER to add the number to editing field.
- Press EXIT to delete one character at one time.
- Continue with additional letter/number until the parameter is complete.
- Press SAVE to save the parameter when finished.

- Use the left(◄), right(►), up(▲) and down(▼) arrow button to highlight the number in the table.
- Press ENTER to add the number to SN#.
• Press EXIT to delete one character at one time.
• Continue with additional letter/number until the parameter is complete.
• Press SAVE to save the parameter when finished.

**ADMIN_PROFL**

The profile screen is used to create up to 8 profiles. Once created, you can customize the switches and setup an auto sequence. Individual profiles are then selected through the user screen.

1. From the ADMIN menu, use the up(▲) and down(▼) arrow button to highlight PROFL option. Then press ENTER to access a list of all profiles.
2. Use the up(▲) and down(▼) arrow button to highlight a profile, then press ENTER to open.

**Lux setting review/edit**

1. From the PROFL menu, use the up(▲) and down(▼) arrow button to highlight the desired profile and then press ENTER to access the editing screen.
2. Use the up(▲) and down(▼) arrow button to highlight the desired type of lamp.
3. Set the light intensity:

   - Press ENTER to access the editing illuminance screen.
   - Use the left(◄), right(►), up(▲) and down(▼) arrow button to highlight the number in the soft keyboard.
   - Press ENTER to add the number to the editing field.
   - Press EXIT to delete one number at one time.
   - Continue with additional letter/number until the parameter is complete.
   - Press SAVE to save the parameter when finished.

**NOTE:**

The settings are valid when the function of 'ADMIN Æ SYS Æ LR KEY' is set to Tech Data.

**Customize Auto Sequence Mode**

1. Use the up(▲) and down(▼) arrow button to highlight 'Auto Prog', and then press ENTER to access the editing profile screen.
2. After highlighted the option, press ENTER to access the desired profile parameter.
3. Select the light source and enter time or lux output of this profile.

- Use the up(▲) and down(▼) arrow button to highlight the desired type of lamp.
- Press ENTER to save.

**Enter Time and Light (Lux) value**
Customize Auto Sequence Mode
1. Use the up(▲) and down(▼) arrow button to highlight ‘Auto Prog’, and then press ENTER to access the editing profile screen.

Use the left(◄), right(►), up(▲) and down(▼) arrow button to highlight the number in the soft keyboard.
Press ENTER to add the number to the editing field.
Press EXIT to delete one number at one time.
Continue with additional letter/number until the parameter is complete.
Press SAVE to save the parameter when finished.

NOTE: Illuminance values can be adjusted only for CWF/TL84/U30 (up to 2000 Lux). In case of ultra-violet light, the intensity can be set (0-100%).

ADMIN_OPER
‘OPER’ menu is used to record up to 8 operator descriptions, which will appear in the reports.

1. From the ADMIN menu, use the up(▲) and down(▼) arrow button to highlight ‘OPER’, and then press ENTER to access the editing screen.

2. Use the up(▲) and down(▼) arrow button to highlight the desired option.
3. Select the desired option/value and enter text.
The following are descriptions of the Operator Options.

**Entering text:**
- Use the left(◄), right(►), up(▲) and down(▼) arrow button to highlight the letter/number in the soft keyboard.
- Press ENTER to add the number to blank.
- Press EXIT to delete one number at one time.
- Continue with additional letter/number until the parameter is completed.
- Press SAVE to save the parameter when finished.

**ADMIN_TIME**

The time screen is used to set the current time and date for the system.

**NOTE:** You need to initially set the date and time so that any lamps can operate.

1. Use the up(▲) and down(▼) arrow button to highlight the ‘TIME’ option. Then press ENTER to access the time settings.
2. Use the up(▲) and down(▼) arrow button to highlight the desired parameter.
3. Press ENTER to access the time parameter settings screen.

- Use the left(◄), right(►), up(▲) and down(▼) arrow button to highlight the number in the soft keyboard.
- Press ENTER to add the number to parameter.
- Press EXIT to delete one number at one time.
- Continue with additional number until the parameter is complete.
- Press SAVE to save the parameter when finished.
4. Continue with additional parameters.
5. Press EXIT button to exit the ‘TIME’ screen when finished.

**ADMIN_RESET**

Restoring factory settings is used to initialize the parameters.

**NOTE:** Once restoring factory settings, all previous settings will be cleared.

1. Use the up(▲) and down(▼) arrow button to highlight the ‘RESET’ option. Then press ENTER to access the factory reset screen.
2. Use the up(▲) and down(▼) arrow button to highlight the desired option.
3. Press ENTER to select the desired option and then press ENTER to confirm.

**User**

The user menu is used to configure operator, profile, attenuator and language settings.

1. From the main menu, use the up(▲) and down(▼) arrow button to highlight the ‘SETUP’ option. Then press ENTER to access its screen.

2. Use the up(▲) and down(▼) arrow button to highlight the ‘User’ option, and then press ENTER to access the User Settings screen.

3. Use the up(▲) and down(▼) arrow button to highlight the desired option.

**Operator**

- Operator: Oper1-Oper8
- Oper1

**Profile**

- Profiles: Profile1
- Profile1

**Attenuator**

- Attenuator: 25%, 0%
- 0% attenuation is 100% lux output
- 25% attenuation is 75% lux output
- 0%-D65

**Language**

- Language: 中文, English
- English

**NOTE:**

- When daylight is set to be D75, attenuator should be set as 25%; when set to be D65, attenuator should be set as 0% (no attenuator). Make sure the settings fit together, otherwise the system will not work properly.

**ADMIN_RESET**

Restoring factory settings is used to initialize the parameters.

**NOTE:**

- Once restoring factory settings, all previous settings will be cleared.

1. Use the up(▲) and down(▼) arrow button to highlight the ‘RESET’ option. Then press ENTER to access the factory reset screen.

2. Use the up(▲) and down(▼) arrow button to highlight the desired option.

3. Press ENTER to select the desired option and then press ENTER to confirm.
4. After the option is highlighted, press the ENTER to access the editing screen.
5. Select desired option or value for the user settings.
   - Use the up(▲) and down(▼) arrow button to highlight one option or select a value.
   - Press ENTER to save the selected option/value.
6. When finished with the user settings, press EXIT to exit the ‘User Settings’ screen.

The daisy chain screen is used to configure the lighting viewing booths or luminaires that are connected together. A maximum of 32 luminaires can be daisy chained.

1. Connect all luminaires that you need to control together.
2. From the main menu, use the up(▲) and down(▼) arrow button to highlight the ‘SETUP’ option. Then press ENTER to access ‘SETUP’ screen.

3. Use the up(▲) and down(▼) arrow button to highlight the 'CHAIN' option, and then press ENTER to access the chain setup screen.

The following are descriptions of available daisy chain settings.

<table>
<thead>
<tr>
<th>Chain Settings</th>

</tr>
</tbody>
</table>
4. Use the up(▲) and down(▼) arrow button to highlight the desired option.
5. After the option is highlighted, press ENTER to access the editing screen.
6. Select desired option form the available daisy chain settings.

To select option:
- Use the up(▲) and down(▼) arrow button to highlight the desired option or select a value.
- Press ENTER to save the selected option/value.
1. From the main menu, use the up(▲) and down(▼) arrow button to highlight the ‘SETUP’ option. Then press ENTER to access its screen.

2. Use the up(▲) and down(▼) arrow button to highlight the ‘REPORT’ option, and then press ENTER to access the report screen.

**System Report**

Running System Report can create a report for the conformance and lamp on the system.

NOTE: Keep the viewing booth empty when running the system report program.

1. Use the left(◄), right(►)arrow button to highlight the ‘REPORT’.

2. Press ENTER to run the lamp test.

3. When the test finished, the device will record the massage automatically.
Operation

Choose the light source

Use up(▲) and down(▼) arrow button and press ENTER button. The light source will continue to light on until you choose another light source or press the light switch again. (The red point on the left of a light source name means the light is switched on.)

Dimming control can increase or decrease the intensity or voltage of fluorescence and UV light source. After activating the light source, press the left(◄) or right(►) arrow button. When adjusting the light source, all of the configured settings will exit.

For other light sources, pressing the left(◄) or right(►) arrow button will review all kinds of sensor data as input data and temperature.

</tr>
<tr>
<td>SETUP</td>
<td>Enter the configuration menu (Please refer to ‘System Setup’ part in this instruction)</td>
</tr>
</tbody>
</table>

NOTE: When you choose to run Daylight 7500K, please follow below operation steps.
A) Assembling the attenuator to the daylight filter which inside the device.

B) SETUP  ➔  ADMIN  ➔  RLAMP  ➔  DL  ➔  LType  ➔  DL7500K

C) SETUP  ➔  USER  ➔  Attenuator  ➔  25%

D) Turn back to main menu, turn on DL light source.
**Auto Sequence**

Run a light source sequence automatically. Specific time (1 to 5999 seconds) for each light source and specific illuminance (1 to 2000 Lux) for fluorescent lamp can be set in each file. The programming is very useful to evaluate samples and focus on their appearance under multiple sources continuously, rather than manually switching between light sources.

**Run Automatic Sequence**

Use up(▲) and down(▼) button and move to ‘AUTO’, press ENTER button. After the time for last light was running out, the power supply will shut off.

**Switch description of auto programming menu**

PAUSE: To pause the procedure, and keep the current light open. Press the ‘PAUSE’ again, return to the procedure. If you want to leave a light opened much longer than the set time, this operation is very useful.

NEXT: To enter the next light source of this procedure.

REP: When completed, repeat the procedure.

STOP: Stop the procedure and exit.

To set up the auto sequence move to ‘AUTO’ then press and hold ENTER button until the settings menu opens.

For customized auto sequence programs, please refer to the ‘SETUP → ADMIN → PROFL’ part in this instruction.
Remote Control

The remote control can be used to turn on light sources from a distance of 10 meters (without any wall or obstacle). If more than one remote control is used for multiple devices, the address code for the remote and the device will need to be changed. Refer to the ‘SETUP → ADMIN → SYS → RF Remote Add’ part for the procedure to change the address code.

- Press the RED AWAKE switch to turn on the remote control.
- Press button to turn on the desired light source. When you press the switch again, the lamp will be turned off.

**NOTE:** a) The remote control will turn to sleep status without any action in 30s. Awake it by pressing the RED AWAKE switch while Green LED twinkle.
   b) Signal send succeed – GREEN LED twinkle
   c) Signal send failed and there is no device – RED LED twinkle

Remote Address Code

The address code that is set in the system settings must be paired with the proper dipswitch settings on the remote control for proper operation. The dipswitches are located on the back of the remote control.

The default address code for the system settings is ‘1’. This setting requires dip switches (1) on the remote control to be set to the ‘ON’ position. If remote address is set to be ‘2’, please set dip switches (2) to the ‘ON’ position.

A total of 8 address codes can be used in the system setting configuration. Refer below for specific address code and dipswitch settings. (From left to right)

Appendix

General Maintenance

Cleaning
1. Turn off the power switch and unplug AC line cord before proceeding with any maintenance procedure.

CAUTION: The daylight filters and incandescent lamps get very hot during normal operation. Do not touch the filters or lamps; allow time for them to cool down before cleaning.

Cleaning the Diffuser
1. Remove the front panel.
2. Hold the diffuser and release the latch to slowly lower down the diffuser.
3. Wash the interior of the diffuser glass with water containing a mild detergent; rinse thoroughly, and air dry.
4. Hold up the diffuser and lock the latch
5. Wash the exterior of the diffuser glass with water containing a mild detergent; rinse thoroughly, and air dry.

Cleaning the Fluorescent and Halogen lamp
1. Remove dust from all lamps with a clean, dry, lint-free cloth.
2. Remove dust from all reflectors with a clean cloth dampened with warm water or an ammonia-based window cleaner. Allow all components to air dry.

Cleaning the daylight filter
1. Remove the front panel
2. Hold the diffuser glass while releasing the latch, and slowly lower the diffuser glass.
3. Hold the filter pack, pull up the fastener-cover and rotate it to cover the thumb screw, then release it to lock the screw. Refer to following figure 1.
4. Release thumb screws and detach the filter. Remove the filter glass out. Refer to figure 2.
5. Wipe dust from filter with a clean, dry, lint-free cloth dampened with some mild detergent. Allow to air dry.
Appendix

General Maintenance

Cleaning

1. Turn off the power switch and unplug AC line cord before proceeding with any maintenance procedure.

CAUTION: The daylight filters and incandescent lamps get very hot during normal operation. Do not touch the filters or lamps; allow time for them to cool down before cleaning.

Cleaning the Diffuser

1. Remove the front panel.
2. Hold the diffuser and release the latch to slowly lower down the diffuser.
3. Wash the interior of the diffuser glass with water containing a mild detergent; rinse thoroughly, and air dry.
4. Hold up the diffuser and lock the latch
5. Wash the exterior of the diffuser glass with water containing a mild detergent; rinse thoroughly, and air dry.

Cleaning the Fluorescent and Halogen lamp

1. Remove dust from all lamps with a clean, dry, lint-free cloth.
2. Remove dust from all reflectors with a clean cloth dampened with warm water or an ammonia-based window cleaner. Allow all components to air dry.

Cleaning the daylight filter

1. Remove the front panel
2. Hold the diffuser glass while releasing the latch, and slowly lower the diffuser glass.
3. Hold the filter pack, pull up the fastener-cover and rotate it to cover the thumb screw, then release it to lock the screw. Refer to following figure 1.
4. Release thumb screws and detach the filter. Remove the filter glass out. Refer to figure 2.
5. Wipe dust from filter with a clean, dry, lint-free cloth dampened with some mild detergent. Allow to air dry.

Lamp Replacement

Replace burned out lamps immediately in order to maintain the total performance criterion of the device. We recommend replacing lamps in complete sets. For example, if one daylight lamp burns out, replace both of them.

<table>
<thead>
<tr>
<th>Lamp Type</th>
<th>Replace after (Time Resetting)</th>
<th>Lamp Type</th>
<th>Replace after (Time Resetting)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Simulated Daylight (D65, D75)</td>

<td>Ultra-violet (UV)</td>
<td></td>
</tr>
</tbody>
</table>

1. Turn off the main power switch and unplug the AC line cord before proceeding.
2. Remove the front panel if viewer box installed.
3. Release the diffuser latch. Lower the front of diffuser until it reaches its fully opened position (vertical).
4. Wait for the lamps to cool down before handling the daylight filter or incandescent lamps. When handling the lamps, always use lens paper or similar products, because skin oils affect the performance of the lamp tube.
Tungsten-Halogen Lamps
1. Daylight lamps only: Hold the filter pack, push in on the fastener button and lower the daylight filter pack. Repeat the procedure for the other filter pack.
2. Push one end of the old lamp into the spring loaded socket to release the other end from its socket.
3. Pull the lamp completely out of the two sockets and dispose it in the appropriate container.
4. Use lens paper (or similar products) when you touch the lamps. Push one end of the replacement lamp into the socket. Refer to the following photo.
5. Insert the other end of the lamp into the other socket and release the lamp. Refer to the photo.
6. Repeat step 2 to 5 for the other lamp.
7. Daylight Lamp only: Turn the daylight filter pack back into its original position and push in on the fastener button to secure. Repeat procedure for other daylight filter pack.

NOTE: If you want to recertify the light sources, please contact your local BYK-Gardner technical service office.

Fluorescent Lamps
1. Rotate the lamp 1/4 turn with both hands, remove it from both sockets. Refer to the following photo.
2. Dispose it in an appropriate receptacle.
3. Install the new fluorescent lamp into the socket.
4. For the other fluorescent lamps please repeat steps 1 to 3.
Tungsten-Halogen Lamps

1. Daylight lamps only: Hold the filter pack, push in on the fastener button and lower the daylight filter pack. Repeat the procedure for the other filter pack.

2. Push one end of the old lamp into the spring loaded socket to release the other end from its socket.

3. Pull the lamp completely out of the two sockets and dispose it in the appropriate container.

4. Use lens paper (or similar products) when you touch the lamps. Push one end of the replacement lamp into the socket. Refer to the following photo.

5. Insert the other end of the lamp into the other socket and release the lamp. Refer to the photo.

6. Repeat step 2 to 5 for the other lamp.

7. Daylight Lamp only: Turn the daylight filter pack back into its original position and push in on the fastener button to secure. Repeat procedure for other daylight filter pack.

NOTE: If you want to recertify the light sources, please contact your local BYK-Gardner technical service office.

Fluorescent Lamps

1. Rotate the lamp 1/4 turn with both hands, remove it from both sockets. Refer to the following photo.

2. Dispose it in an appropriate receptacle.

3. Install the new fluorescent lamp into the socket.

4. For the other fluorescent lamps please repeat steps 1 to 3.

---

Fuse Replacement

1. Shut off the power and remove the AC line cord.

2. Use screw driver to open the fuse box. Remove the burned out fuse and replace with the back up one.

3. After replacement, push the box to its closed position. Refer to the following photos:

## Troubleshooting

**Problem**

- No Response
- Lamp not working
- Remote Control not working
- Daisy chained luminaires not working

**Cause/Solution**

- Please check the switch on the front panel is ON properly
- A fuse is burned out. Refer to ‘Fuse Replacement’ in the maintenance section.
- Device is unplugged. Make sure the AC line cord is plugged in.
- Contact our technical support.
- Lamp is not installed correctly. Refer to ‘Lamp Replacement’ in the maintenance section.
- Temperature is too high. Allow time for the lamps to cool down before operation.
- Contact our technical support.
- IP Address does not match. Refer to ‘Remote Control’ section.
- Remote is in sleep mode. Press RED AWAKE switch (with red led twinkling once) to awaken it.
- Remote Control is out of power. Replace the battery.
- Frequent start or shut off the device. Shut off the power and wait for 10 sec before turning it on again.
- Contact our technical support.

EC Declaration of Conformity

We, BYK-Gardner GmbH
Lausitzer Strasse 8
82538 Geretsried

herewith declare that the product:

Type: byko-spectra pro

comply with the requirements of the following EC directives:

- 2014/30/EU Electromagnetic Compatibility
- 2014/35/EU Low Voltage

The following harmonized standards were applied:

- EN 61010-1:2010
- EN 61326-1:2013
